

# cold chain management

Target: [www.medair.ca/coldchain](http://www.medair.ca/coldchain)

As a GDP-compliant carrier our focus is to act in accordance with global regulatory requirements for the handling, storage and distribution of thermally labile material and ensure product quality and integrity are not compromised in the distribution channel.

MEDAIR Life Science Transport Solutions specializes in the handling of active, semi-active and passive shipping systems ensuring stability regardless of the ambient temperature. We use only the most advanced materials available with a full range of validated packaging options and temperature data loggers.

## Medair is focused on providing:

- Advice on country-specific regulatory compliance, permits and Custom procedures
- Global management and provision of validated thermal packaging, including recyclable and reusable solutions
- Temperature-controlled and mapped vehicles
- Calibrated data-logging service
- Active container handling (Envirotainer, Unicooler and Csafe)

## Temperature ranges supported:

- Cryogenic (-180°C - Liquid Nitrogen)
- Deep frozen (-70°C - Dry Ice)
- Frozen (-20°C - Gel packs)
- Refrigerated (+2°C to +8°C - Gel packs)
- Controlled ambient (+15°C to +25°C)

Did you know we have been handling active containers worldwide since 2001?
